## FEEDING DIRECTIONS

Canaries require only a small amount of food although as a percent of the canaries' body weight the amount required is quite large. However, food must be available at all times. A canary cannot survive a period of 24 hours without food. Seeds should be changed daily to remove seed husks or seeds spoiled by the bird's droppings. Always maintain a source of clean, fresh water, canary grit, and a cuttle bone as a source of calcium.

**To maintain freshness store in a cool dry environment. For extended storage keep refrigerated.**
