## FEEDING DIRECTIONS:

Offer Buckeye® 16% Rabbit Maintenance Pellets free choice to Breeders -12 weeks of age and older in a rabbit feeder or a clean feed bowl. Place enough feed in the feeder that they will consume in one day. Rabbit are basically nocturnal feeders and will consume most of their feed at night. Breeding animals may have to be limit fed to maintain their ideal body weight for top reproductive performance. Rabbits will consume approximately 1 ounce of feed per pound of body weight per day or approximately 6% of body weight per day. Maintain a clean fresh supply of water available to the animals at all times. Salt or hay are not required by rabbits being fed Buckeye® 16% Rabbit Maintenance Pellets and may be a source of uncleanliness to the rabbits.

When rabbits are being worked regularly and rapid gain is required, it is wise to use Buckeye® 18% Rabbit Developer Pellets or Buckeye 16% Rabbit Pellets. Buckeye 18% Rabbit Developer Pellets are also used when showing for conditioning.
